WHAT IS MICROFIBER?

MICROFIBER IS A COMBINATION OF POLYESTER AND NYLON. IN ORDER TO OBTAIN HIGH-QUALITY MICROFIBER PRODUCTS, MICROFIBER FABRICS MUST UNDERGO SUFFICIENT FIBER OPENING DURING THE FINISHING PROCESS. THAT IS, UNDER THE ACTION OF HIGH-PRESSURE DYEING VATS AND ADDITIVES, THE TWO COMPONENTS IN THE FIBER ARE SEPARATED TO CREATE VOIDS. THE CUT SURFACE OF THE NON-WOVEN FIBER AFTER OPENING LOOKS LIKE A STAR. THE VOIDS FORMED IN THE FIBERS AFTER FIBER OPENING ENABLE SUPERFINE FIBER PRODUCTS TO ABSORB DUST, DIRT, LIQUID, AND OTHER FUNCTIONS.
